

RUBBERISED PLYGENE

GUTTERLINE[®] SYSTEM

Economical, efficient ... the tried and trusted Secondary Guttering System Guaranteed to Stop Sectional Concrete Gutters Leaking

- ★ A system developed exclusively for built-in sectional concrete gutters
- ★ Can be fitted to individual or adjoining properties
- ★ Supplied on a seamless roll
- ★ Custom-made for every project
- ★ No internal disturbance
- ★ Long-lasting and effective

Rubberised Plygene Gutterline[®] Secondary Guttering System is manufactured exclusively by H D Sharman Ltd and it is now the fully approved system of choice for local authorities, housing associations, the MOD, NHS and thousands of private home owners.

Far easier and more economical than replacement, and much more efficient than other liners, and patch 'n' paint repair methods, Gutterline[®] doesn't simply waterproof the outer trough, but is designed to totally overcome all the problems that can lead to gutter failure, water penetration and internal dampness.

Gutterline[®] can be used for sectional concrete gutters on a complete row of properties, a partial row, or even a single home. Rubberised Plygene is incredibly strong so it will not crack or split, yet because it is also pliable it will instantly conform to irregular contours. Even building movement has no adverse affect.

In addition to the seamless liner itself, the system also incorporates a special wide-section, under-tile Plygene sarking angle which provides additional waterproofing protection at the vulnerable perimeter of the roof and prevents any water entering the rear channel.

Gutterline[®] is the only system of its type to be fully approved by the BBA and when fitted to manufacturer's instructions it is Guaranteed Waterproof.

The Gutterline[®] Secondary Guttering System incorporates a full range of accessories including outlets, endstops, pre-formed corners, boundary dividers and encapsulation strips. Installation training is available free of charge.

No messy adhesives. Can be fitted in most weather conditions. Fully Patented.

MANUFACTURED EXCLUSIVELY BY H D SHARMAN LTD

RUBBERISED PLYGENE

GUTTERLINE® SYSTEM

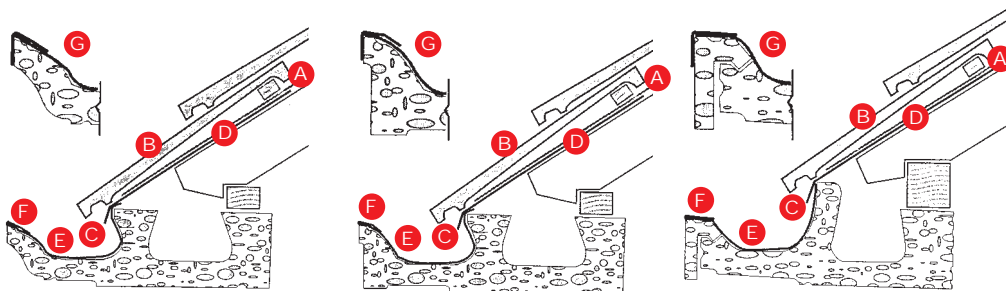

**ORDERING AND FITTING
COULD NOT BE SIMPLER**

Before ordering your Gutterline®, establish which type of gutter you will be lining by checking the profiles.

Also check the number and internal diameter of the existing outlets, the number and types of the corners, plus any other features as shown on the diagram.

To help us prepare an accurate quotation of cost, a rough outline plan would be of assistance.

The Gutterline® liner is supplied in one continuous length and will be manufactured to fit the gutter profile you specify. It is only joined where it abuts a moulded corner section and this joint is made easily and quickly using a hot air welding process or a joint sealing kit. If the liner abuts another property which is not being lined, a boundary joint sealing kit is fitted on the boundary to seal the liner to the gutter.

TYPE G

TYPE N

ROYSTON

- A. Plygene Sarking Angle (should be fitted underneath the roofing felt and fastened under the first slate batten)
- B. Slates
- C. Plygene Sarking Angle
- D. Roofing felt
- E. Gutterline
- F. Front edge hold-down clamp
- G. Alternative front edge capping

1. Existing sarking felt on top of new Plygene sarking
2. Special wide sarking angle
3. New sealed outlet can be in existing or in any new location
4. External corner terminator (left hand shown)
5. Internal running corner
6. External running corner
7. Secondary gutter liner can be of any seamless length to order
8. Boundary joint sealer kit seals the liner to the gutter to prevent house to house travelling leaks
9. Encapsulated edges screwed and sealed to concrete gutter

★ ★ ★ ★ EASY, ECONOMICAL .. HERE'S THE PROOF! ★ ★ ★ ★

All it took was one viewing of the demonstration video showing how easy it was to make leaking sectional concrete gutters permanently watertight for Wessex Property Services (WPS) Eastleigh, Hampshire to give the go-ahead for a refurbishment programme using Rubberised Plygene Gutterline® that included almost 1000 properties. Following a simple instructional visit by an H D Sharman expert to show the WPS roofing team how to fit Gutterline®, they have now become so skilled that they can complete a pair of semi-detached properties in less than a day.

★ A DEMONSTRATION VIDEO OR TRAINING SESSION IS AVAILABLE FREE OF CHARGE ON REQUEST ★
