

PLYGENE® STRIP CURTAINS

Plygene® Strip Curtains reduce draughts and save energy

We manufacture strips for interior or exterior use. It is strong and durable. Stock widths are 6" and 12". Strips can be simply nailed up to a timber batten using large headed nails, or we can supply it with a tubular top for sliding on to a scaffold or similar pole, (2"o/d). This simple method is very effective and much easier to use. All grades are suitable for hanging either single or double overlap. In addition to translucent strips we manufacture them in black, these are mainly used in the broiler industry for use when catching birds, they provide easy access for the catchers but reduce light penetration into the shed thereby reducing panic and bird damage.

<p>Single Overlap - requires one and a half times the door width.</p> <p>Plain ends nail up type. 2 rows of strips with spaces between each edge.</p> 	<p>Double Overlap - requires twice the door width</p> <p>Plain ends nail up type. 2 rows of strips edge to edge.</p> 
<p>Single Overlap</p> <p>Tubular end pole type. 2 rows of strips with spaces between each</p> 	<p>Double Overlap</p> <p>Tubular end pole type. 2 rows of strips edge on one pole</p>
